This is what I'm trying to do: `private void RunOnce() { if (textBox.Focus) { // Do stuff } else { // Don't do stuff } }` Is there a way to detect this type of change? Thanks! A: If you're in a WPF Window (vs. an XAML user control) you can use the `FocusManager.FocusedElement` property. If you want to know if the focused element is your control or not, you can use the `FocusVisualStyle` property to see if the control has the focus style changed. A: This should do the trick `private void RunOnce() { var window = Window.GetWindow(this); if (window != null) { window.Focus(); } }` I am assuming you do not want to get out of the current window.
