This study presents a novel approach to the analysis of long-lived organic matter (OLM) using high-temperature gas chromatography/mass spectrometry (GC/MS). The method was applied to lake sediments that had been stored for up to 1 year. Inorganic, i.e. non-organically produced, OM was identified as a minor component (1-2%) and minor OM was found in high abundance (more than 90%). The highest concentrations of the long-lived OLM were in sediment with high content of fine grained material (more than 80% of >1 mm). The average concentrations of the OLM ranged from 0.05 to 2.3 wt%, and were found to increase with depth to as much as 15-18 wt% of the total sediment. The analysis did not support the possibility of more than one stream of long-lived OM production. The analysis was also applied to a sediment sample with an apparent lake sediment age of 52 ka, indicating that OLM has been accumulating over the last few centuries. The ability to identify long-lived OM produced by plants and microorganisms can be useful for clarifying the fraction of the terrestrial carbon budget that is due to terrestrial OM.A and $10,000.00 with prejudice. It is further ORDERED that Peter J. Feiger and his surety are awarded attorneys fees of $7,500.00 with 12% interest from September 28, 2012, the date of the default judgment. All costs associated with this matter are assessed against and taxed to RCS Welding and Fabricating, Inc. /s/ FORM WEST, Judge LSA-R.S. 13:4241(A)(2) provides: "The court may award reasonable attorney fees, including legal fees, to the prevailing party in any civil action brought under this Part, in the discretion of the court. Such awards shall be based on the extent to which the party against whom the fees are awarded has failed to comply with his duty to comply with the

I'm new to Baire space and wanted to know what is the smallest compact space with respect to Baire space. The Wikipedia article says that all Baire spaces are compact. Does that mean that their Baire spaces are compact? I know that separable Lindelöf spaces are compact. Are they all compact in that case or there are compact non-separable Lindelöf spaces and compact Baire spaces? A: There are no compact Baire spaces. A space X is compact iff the open sets separate X. X is separable iff the collection of all open dense sets separate X. Let X be any non-empty space and $\mathcal{B}$ the collection of all open dense subsets of X i.e. $\mathcal{B}=\{B\cap U\,\mid\,B$ is an open set in X and U is an open set in $X\}$. As X is non-empty, $\mathcal{B} e\emptyset$. So, every space can be defined by a collection of open dense sets. The following theorem is based on the observation that open dense subsets of an open set $U\subset X$ are open sets in X. Let X be a non-empty space and $\mathcal{U}$ the

collection of all open subsets of X. If $\mathcal{U}$ is an effective filter then the space X is homeomorphic to $\bigcup \mathcal{U}$. A proof can be found here. Every Baire space 0cc13bf012
