Adobe Photoshop: Step-by-step Tutorials Free Adobe Photoshop Tutorial Learn free Photoshop tips and tricks from Photoshop guru Ian Cripps. His superb tutorials cover many common things that you should know how to do: re-sizing images, converting, resizing, cropping, adding text, and much more. Great site. Photoshop Learn Photoshop tricks and tips from a variety of teachers that teach the basics, intermediate skills and more advanced techniques. LearnPhotoshop.net LearnPhotoshop.net is a great site with free tutorials for beginner, intermediate, and advanced photoshop techniques. Adobe.com Adobe.com offers lots of great tutorials to learn how to work with Photoshop. BlueprintMag.com Tutorials by the magazine designers for more advanced and professional techniques are the best if you are already an expert. Online Tutorials Nuts & Bolts There are many online tutorials for Photoshop also. Html Tutorials Html tutorials from top tutorials sites are quite common. In fact, html tutorials have become a mainstay of the web for designers, and are now available at many great sites.Q: Passing an array of Object to a method via a ref parameter, and the object the method returns I am working with Spring 3.0.3 and Hibernate 3. I have a method in my Spring bean which I would like to extend a feature on it. The method is in the form of something like public List getSomethingList(int[] item); with a Get Something List to get the items that exists into the database, since this is done quite often in our organization, I would like to make it a Spring method that I can use as a utility method and make it generic, something like @SuppressWarnings("unchecked") public List getSomethingList(int[] item) { //.. do database lookup with item List l = (List)session.createQuery("select...").setFirstResult(someStartIndex).setMaxResults(someMaxItems)

In this tutorial, I'll show you how to open any digital photo in Photoshop and how to achieve different effects. I'll also discuss things like the different tools available to you and some methods that you can use to achieve similar effects. Step 1: Open a photo in Photoshop Elements Create a new document in Photoshop Elements, or choose File → New. You can also drag a photo from the Photo Library to create a new document. Step 2: Rotate the photo Click the Rotate icon (top left) and select Rotate 90° CW or Rotate 90° CCW. If you're working on a photo with lots of objects on top of each other, you can keep the picture organised by "flipping" it, so that objects appear upside down in your work. Click the Flip icon (top left). Step 3: Correct the perspective The most common cause of distortion in photos is a tilted horizon. To adjust the tilt, drag the Zoom-in and Zoom-out grips (top left) and position the edges of the screen where you want to be. Drag the white line, or line up the edges of the screen. This adjusts the perspective of the photo, and you should be able to see the horizon in the photo match the horizon in the landscape. Step 4: Rotate the photo horizontally On a photo that is rotated horizontally, select the Rotate Image icon (bottom left) and drag a corner of the canvas to rotate the photo. (You can also use the Rotate tool). Step 5: Select a part of the photo The most common cause of distortions is over exposure. The camera often over exposes the background and under exposes the subject. A good way to reduce the effect is to make a selection that only includes the subject you want. Select the Rectangular Marquee tool (top left) and drag a selection around the area you want to keep. Make sure you don't over shoot the selection, as you will lose the rest of the photo. Click the Delete icon (top right) and discard the selection. Step 6: Rotate the photo vertically To rotate the photo vertically, use the same method as in Step 5, select the Rotate selection tool, 05a79ceccff

Q: RxJava 3 Observable.concat() I have an Observable that emits when a user clicks a button and I would like to use concat() to create one Observable that when this button is clicked emits once if there is no previous clicks. My problem is that I cannot use asJavaObservable() and merge() to create this one Observable because you can only use this with two or more Observables. So for example if I have: observable1().observable2().observable3() Observable.concat(observable1(), observable2(), observable3()) will throw a Exception. I cannot use Observable.just(observable3()) because I cannot be sure that the observable will be emitted by the button in the first place. The best solution I came up with so far is to use Observable.merge() to create my Observable and combine it with the stream that is emitted by the button's onClick() but it's not clear for me how to determine how many clicks there are within this stream. This is my current code: this.clickStream().subscribeOn(Schedulers.computation()).observeOn(Schedulers.computation()).merge() A: Use concatWithRefCount() instead of concat() this.clickStream().subscribeOn(Schedulers.computation()).observeOn(Schedulers.computation()).concatWithRefCount() The capillary permeability of normal and diseased human umbilical cord is lower than that of peripheral tissue. The determination of capillary permeability is important in the study of endothelial function as well as in the study of early development of systemic diseases. We have determined the capillary permeability of human umbilical cord and compared it with peripheral tissues and neoplasms (pancreas, liver, lung, stomach, colon, rectum, breast, and prostate). We determined

Recombinant human interleukin-4 inhibits production of interferon-gamma by peripheral blood mononuclear cells from patients with chronic inflammatory arthritis. To clarify the effects of recombinant human interleukin-4 (rhIL-4) on the production of interferon (IFN)-gamma, we examined the influence of rhIL-4 on the generation of IFN-gamma in patients with rheumatoid arthritis (RA), systemic lupus erythematosus (SLE), and ankylosing spondylitis (AS). rhIL-4 inhibited IFN-gamma generation from peripheral blood mononuclear cells (PBMC) of RA patients in a dose-dependent manner. rhIL-4 also inhibited IFN-gamma generation from PBMC of SLE patients. In contrast, IFN-gamma generation was not suppressed by rhIL-4 in PBMC of AS patients. rhIL-4 concentrations that suppressed IFN-gamma generation were 0.05-0.5 ng/ml for RA, 0.1-0.5 ng/ml for SLE, and 1 ng/ml for AS. rhIL-4 concentrations lower than those did not affect IFN-gamma generation from PBMC. Anti-IFN-gamma antibody could block the suppressive effect of rhIL-4 in RA and SLE. These results indicated that the production of IFN-gamma in RA and SLE is suppressed by IL-4, while IFN-gamma production is not inhibited by rhIL-4 in AS. It is likely that IL-4 is involved in the pathogenesis of chronic inflammatory arthritis.Hypoxia-inducible factors (HIFs) and their inhibitors in the development of renal cancer. Hypoxia, which results from inadequate tumor vasculature, is a common feature of solid tumors and is a major contributor to therapy resistance and poor outcomes in cancer patients. Malignant renal cell carcinomas (RCCs) display high dependence on oxygen and are frequently hypoxic. Renal tumors as a whole have a poor prognosis, though there are individual differences in tumor biology and therapy response. Therefore, identifying the mechanism of hypoxia-induced malignant transformation and tumor progression in RCC and developing strategies to overcome it are of critical importance. In this review, we discuss the roles of hypoxia-inducible factors (HIF

System Requirements:

* Games need to be patched to a higher version than the one you are installing. This means that both the patch and game version should be higher than what is listed below. Steam: * Windows 7 or higher * Intel Core2Duo, AMD Athlon64 X2 or higher * 2GB of RAM * 3D Hardware Acceleration is required for this game. * At least 10GB of available space. * You can use VAC instead of Steam Guard in order to play the game.
