Conor Daly  
Conor Daly (born March 26, 1993) is a professional American racecar driver. He was born in Duluth, Minnesota. He graduated from Barber-Scotia High School.

Racing career Nationwide Series  
Daly debuted in the Nationwide Series in 2010 at Phoenix in a Richard Childress Racing Nationwide car driven by Michael McDowell.

K&N Pro Series  
In his career, Conor has done a total of six races in the K&N Pro Series West, with a best finish of 6th in 2013 at Kern County Raceway Park.

ARCA Racing Series  
In 2015, Conor made his ARCA debut at Daytona, running a limited schedule that included three races. He returned in 2016 to run a full season in the series in a car owned by his father, Tom Daly. He was rewarded with his first career ARCA win in the first ever race at the newly reopened Daytona International

---

Speedway, and his first career pole position. Camping World Truck Series In 2013, Conor made his Truck Series debut at Dover, driving for Tommy Baldwin Racing in a truck owned by his father, Tom Daly. Sports car racing Conor competed at the 24 Hours of Daytona for the first time in 2014, and won his first race in the GT-class, finishing 3rd overall. He also ran another race at the 24 Hours of Daytona in 2015, where he qualified on the lead lap in 18th position. Motorsports career results NASCAR (key) (Bold – Pole position awarded by qualifying time. Italics – Pole position earned by points standings or practice time. \* – Most laps led.)

Crack | 114k.1. Field of the Invention This  
invention relates to a device for cleaning  
plates of chemical analyzers and the like,  
by being put in a cleaning position to soak  
up a detergent on the surface of the plates.  
2. Description of the Prior Art The

---

determination of an analyte present in a test subject is usually performed by chemical analysis. There is known a chemical analyzer in which a plurality of test items are automatically arranged on a plurality of analyzing test places and a reaction liquid is allowed to react with the analyte in the test items to conduct a specific analysis. When the determination is performed, the test items are dipped into a reagent in a reagent cup and are allowed to react with the reagent. Subsequently the reaction items are washed with water. A test item is dipped after it is washed with water to conduct a chemical analysis. In this chemical analyzer, a plurality of test items are arranged on a plate and a test item to be washed with water is dipped into water in a washing cup after it is arranged on the plate. Therefore the plate is hard to be washed by water. In addition, a test item which is a reaction item is dipped in a reagent cup to be washed and

---

then is dipped into a reaction cup so as not to let a reagent which is a reaction product be mixed with a washing solution.

Therefore a solvent for the reaction reagent is required to be handled.

Recently, instead of a glass material such as a cuvette, a disposable plastic plate is used as a test item in a chemical analyzer, but a device for cleaning a plate is not provided with a mechanism for soaking up a detergent or the like on the plate, because the plate is a disposable plate of a
