The three-dimensional (3-D) directionally modulated scattering characteristics of rough surfaces with nearly normal-incidence illumination are studied. The scattering pattern is calculated by use of the asymptotic perturbation technique based on a rigorous integro-differential scattering model. A finite element method is used to simulate a rough surface consisting of a Gaussian random speckle pattern. The

I'm learning C# and I see a lot of what's seem to be public, protected, and private members used throughout a class. So my question is when these members are used? For example: public class Enemy{ private Vector _pos; public Enemy(Vector pos){ _pos = pos; } public void Move(){ // move the enemy } public void Die(){ // Die } public void Rotate(float angle){ // Rotate the enemy } protected void ChangeEnemyConfig(float acceleration, float distance){ // Change the enemy config } public float Length(){ // Return enemy length } public bool CanAura(int damage){ // Can this enemy cast a cure? } } Do public members get used for the entire class or only when you have private, protected, or internal members? Also, why is there a need to have public for something that the entire world can access? For example: void Die(){ // Die } Do all members have to be public? Can anyone help me out with any questions? Any help or advice is greatly appreciated! A: EDIT, after understanding the OP's question: If you are referring to

public class fields and methods, they can be accessed within the class itself. For example: public class

FTP Server is a FREE Windows software that allows you to securely transfer files over the internet. FTP Server is an ideal solution for webmaster, for home users, or even for large enterprise.
Please follow the tutorial below to set up FTP Server on Linux or Windows PC.

FTP Server on Windows

1.Install the.NET Framework and Microsoft.Web.Administration Assembly. This is done by visiting the start menu, selecting "Run as administrator" and the following command will launch the setup:

```
%windir%\Microsoft.NET\Framework\v4\setup.exe
```

In the following window, select "Add Features" if prompted. If not, select "Next" to begin installation.

2.On the "Features" page of the wizard, be sure you select "Web Management Tools."

3.Apply the remaining setup components with the same process as in step one.

4.When prompted, select "Configure Web Site Collection Administration Tools."

5.Next, the wizard will check for prerequisites. Select “Yes,” to proceed.

6.Once the prerequisites are downloaded and installed, the wizard will complete.

7.In the “Web Site Collection Administration” window, be sure you select “Create the site collection.”
