## Extended System Tray

This is an addin for Yahoo! Widgets that adds a system tray icon that displays the current power level of battery, CPU, RAM, and Wifi. Because of the complexity of the power management subsystems in Windows, most of the time you may want to set the refresh interval to something very low, say, once every 2 seconds, so that you can focus on what you're doing without the tray icon hanging over your work. On the other hand, you might want to see what's happening every second, so you'll want to make the refresh interval say 10 seconds. To achieve these goals, Extended System Tray Crack allows you to set either the refresh interval, or the number of times that the icon is displayed per second. This addin relies on Yahoo! Widget Engine, and is thus subject to its limitations and bugs. It is incompatible with any other addin of this nature. Misc notes: - I won't be able to answer any questions you may have on this addin. That's why I came up with the ExtSysTray forums. I would like to add the simple fact that for those using Yahoo! Widgets, I have created the ExtSysTray addin for you. It will add the yahoo! widget power icon to the system tray on Microsoft Windows and Windows 95 systems. You can easily customize the look and feel of the system tray icon by editing the.png and.bmp files which come with this addin. I know it's been awhile, I thought I'd start writing this for a few reasons. 1. It would be nice to see where I've gone with these

scripts and see where I'm headed with them. 2. It would be nice to see if any of you have used any of the tools I've created. 3. It would be nice to get feedback on how the tools are working. 4. It would be nice to get feedback on how the tools are working Unfortunately, I can't promise to post these regularly. My time is limited, as I'm working on a couple of other projects. I would like to get feedback and suggestions so I can enhance these tools.
