Some of the most common and useful features of Photoshop are discussed in Chapters and, but because this book does not cover these features in any great depth, I give you the basic definitions in this chapter. Deleting, or erasing, a layer in Photoshop means simply deleting the actual layer, unlike in a word processor, where you just delete what's between the words. If you're talking about deleting a layer, not erasing, you can restore a layer by pressing Ctrl+Z (?-Z) or by clicking the Eraser tool, which is the default tool of Photoshop.

Colorado man accused of executing wife, decapitating daughter Published duration 3 October 2017 image copyright Colorado Springs Police Department image caption Joshua Cummings was arrested on suspicion of murder after the woman's decapitated remains were found in a vehicle A man has been arrested after a woman's decapitated body was found in a vehicle in the US state of Colorado. Joshua Cummings was charged with one count of second degree murder, according to authorities in the city of Colorado Springs, Colorado. The woman's decapitated body was found in the boot of the vehicle after a local resident called police to report a "suspicious vehicle". Mr Cummings is being held in police custody pending a court appearance. Forensic investigators believe the woman had been dead for several days. It is thought she may have been killed sometime on Saturday. They found a tattoo on her forearm that "reflected the message 'J.C,' " according to a statement from the Colorado Springs Police Department (CSPD). They also found an address for Mr Cummings written on her arm in a phone booth but it was not clear whether that was his permanent or temporary home. The remains were discovered after police found the vehicle, which had Mr Cummings' fingerprints, parked with its lights on on a cul-de-sac in an affluent neighbourhood of Colorado Springs. "I think he went a little bit over the edge," neighbour Donald Wright told KKTV. "It's really scary, and it'll be a great relief to all the neighbours." image copyright Colorado Springs Police Department image caption Police found the woman's tattoo on her forearm Two men were arrested following the discovery of the body. But police later arrested Mr Cummings on suspicion of second-degree murder. "We are no closer to a motive. We still have a lot to work on but we are making progress," Chief Vern Olsen told the Associated Press. "We are of course looking for the man or people responsible for the death of the victim and the threat to the community," he added. Mr Cummings' lawyer told reporters that his client was "naive" about his wife's moods.Q: Best way to render a gantt chart in a web page I want to make a gantt chart in a web page. 1. Field of the Invention The present invention relates to a flow-rate controller for controlling the amount of fluid supplied to an external device, and in particular to a flow-rate controller with a resistive element for controlling the amount of fluid. 2. Description of the Related Art A flow-rate controller comprises a resistive element for passing a current, a variable resistor (variable resistor element) that is connected to the resistive element and adjusts the resistance value of the resistive element, and a feedback circuit for monitoring the output of the resistive element and applying feedback to the variable resistor element to maintain constant the output of the resistive element. In the resistive element, a variable resistor (variable resistor element) that is connected to the resistive element and adjusts the resistance value of the resistive element, and a feedback circuit for monitoring the output of the resistive element and applying feedback to the variable resistor element to maintain constant the output of the resistive element are provided as basic components. The feedback circuit comprises a constant current circuit that supplies a constant current to the resistive element and a voltage amplifier that amplifies the difference in voltage between the output of the resistive element and a reference voltage. FIG. 9 shows a flow-rate controller disclosed in Japanese Patent Laid-Open No. 2009-253324 as a conventional flow-rate controller. In this flow-rate controller, a fixed-value current circuit that supplies a constant current to a resistive element and a feedback circuit that compares the output voltage of the resistive element and a reference voltage to provide feedback are provided as basic components. In this conventional flow-rate controller, a constant current source that supplies a fixed-value current to a resistive element is provided as a fixed-value current circuit. The constant current supply circuit is structured using an operational amplifier. Therefore, a current flows into a resistive element via the emitter of a PNP transistor whose base is connected to the output of the operational amplifier and the collector of the transistor is grounded via a diode. The current has a fixed value of I (mA) as a function of the emitter voltage V<sub>be</sub> (V) of the PNP transistor. A fixed-value current circuit that supplies a constant current to a resistive element is constituted as described above, thus providing a flow-rate controller that can be inexpensively manufactured. In the conventional flow-rate controller, however, a large current flows through the PNP transistor
