While this major version is an upgrade to AutoCAD, it does not replace any previous version of AutoCAD. Versions 6.0 through 2016 (Release 2016) support Windows operating systems (including 8.1, 10, and Windows 7). Versions 4.0 through 5.1 (Release 2010) support Windows operating systems (including 8.1, 10, and Windows 7). Versions 3.0 through 4.0 (Release 2008) support Windows operating systems (including 7 and Windows XP). Versions 1.0 (Release 1985) support Windows operating systems (including Windows 3.x). In recent years, AutoCAD has enjoyed great success as the world's most popular, best-selling CAD and drafting software application. The software was originally developed by AutoDesk, Inc., which was purchased by Autodesk in 2010. Autodesk provides continuous support, maintenance, and upgrades for the software, and provides a variety of support and training services to help users become proficient in using AutoCAD. The most current version of AutoCAD is 2016, released in June 2016. In the years since AutoCAD's initial release, the software has become a fixture in the workflow of most CAD and drafting software users. It is available as a desktop app on Windows, Mac, and Linux computers. AutoCAD offers an online (cloud-based) version for use with a computer connected to the Internet, and a mobile and web version for use with mobile and web-enabled devices. AutoCAD brings the power of AutoDesk's powerful, yet easy-to-use, user interface to the world of drafting. The AutoCAD software suite allows the user to create any drawing type imaginable. It offers the user full control over the details of their work. It can generate any drawing type imaginable, in any scale or scale increment. It can create any geometric object, including parts and assemblies, as well

Autodesk Exchange also provides the ability to upload and download, as a ZIP file, an entire branch or project of your entire AutoCAD source code. This would include the Visual LISP source files as well as associated files for other project settings. AutoAPI is the AutoCAD Application Programming Interface (API) created by Autodesk for the third-party development community. AutoAPI allows software developers to create and install add-on applications. The developer does not need to know any of the underlying AutoCAD concepts and can focus on developing the functionality they desire, without being concerned about AutoCAD's underlying data structures. Additionally, the AutoAPI allows the software developer to embed AutoCAD functionality in their own software. This would allow the end user to execute the program without having AutoCAD installed on the computer. It would also allow the end user to use any model created with AutoCAD. The API is an extension of the Visual LISP programming language used in AutoCAD. AutoLISP is an automation language created for AutoCAD. It is a type of extensible programming language that allows developers to add new commands and extend AutoCAD's built-in features. Additionally, contrast-enhanced CT examinations may be useful to demonstrate the presence of tumor invasion or any mass effects and are often performed as a part of the staging work-up. Enhanced CT may also be helpful for further imaging investigations, e.g., metabolic imaging (PET-CT). However, the addition of contrast medium does not guarantee a definite diagnosis because the majority of mesenchymal tumors may undergo marked vascularization as well as necrosis, which prevents a clear distinction of the tumor from the surrounding tissue. To our knowledge, there is no report in the literature showing a clear correlation between imaging appearance and the histopathologic findings in GISTs. Such observations have to be confirmed by further studies. In summary, GISTs are rare tumors, for which surgical excision is the standard treatment. The pathologist's key role is the identification of malignant GISTs. Clinical history, physical examination, ultrasound, and CT may help the clinician to decide whether a biopsy is necessary. MRI may further facilitate the visualization of some specific signs of malignancy (e.g., signal hyperintensity of GISTs on T2w) and is a helpful technique to assess the extent of the tumor.
