YÃ¼zyÄ±lda YapÄ±lmÄ±ÅŸ Bir Ã°limler Ansiklopedisi TercÃ¼mesi: Terceme-i Kitab-Ã°.Q: django & celery task group vs task queue I have some tasks in python script and i want to perform them in separate thread so i used celery. first i tried to perform all tasks in one worker of celery, which not work as expected. so i tried to use celery group to group each task. Here is my code, in my settings file CELERY_BROKER_URL = 'redis://localhost:6379' CELERY_RESULT_BACKEND = 'redis://localhost:6379' CELERY_TASK_QUEUE = 'background' CELERY_IMPORTS = ('script.tasks',) CELERY_GROUP = 'tasks' CELERY_DEFAULT_EXCHANGE = 'celery' CELERY_DEFAULT_EXCHANGE_TYPE = 'amqp' CELERY_DEFAULT_RESULT_BACKEND = 'redis://localhost:6379' CELERY_DEFAULT_ACCEPT_TIMEOUT = 60 in tasks.py @app.task def add(x, y): return x + y @app.task def sub(x, y): return x - y And in celery.py async_add(x, y) So my question is : when adding first task to queue how does celery works? and what is advantage of using task queue? and when

I have used this short code to create a loop: query("//a[contains(@href, '\$pattern')]" as \$post) { \$posts[] = array('node_id' => \$post->getAttribute('id'), 'node_url' => \$url, \$post->getAttribute('href'), 'value' => 'value from a (h1, h2, etc)', 'index' => \$x); } } \$count = count(\$posts); \$days_ago = __("+2 months", 'hixt')." __("-2 years", 'hixt'); ?> here is the output: I want to merge like the 2 last lines. I tried using array_merge but it didnt work. A: I use an array to link the desired node values, and then join them later: function extract_categories(\$dom, \$pattern, \$curr_node_id) { \$posts =

```
array(); foreach ($dom->query("//a[contains(@href, '$pattern/')]") as $post) { $posts[] = array( 'node_id' =>
    $post->getAttribute('id'), 'node_url' => $url
```
