Introduction to Photoshop What is Photoshop? Photoshop is an image editing program that allows you to manipulate images and create graphics. Applying filters, using vectors, modifying colors, transforming, combining images, and adjusting document settings can all be accomplished through the use of a variety of editing tools, templates, and other techniques found in the program's menu bar. Using Photoshop is easy. Click and drag, or press enter to undo a command. You use the line tool to draw, or paint, and its position is automatically changed. To select a color and apply it to a line, simply click on the line and it will turn the color. Click on the color button in the toolbar and an array of colors will be displayed, allowing you to choose the color for any object. The "Hue/Saturation" dialog box appears on the right side of the screen. Adjust the saturation and hue (color) of the selected object. To quickly transform, rotate, or scale images, use the Transform menu bar, which includes the Scale, Select, Resize, Skew, Perspective, Distort, and Mirror tools. To move an object, click and hold on the object and drag it to the new position. To move or rotate multiple objects at once, hold shift while you click and drag any object. To align an image, use the Align (Align to Pixel Grid) button in the toolbar and click the Align button on the page of the dialog box that appears. To resize an image, drag the slider to resize the image. Photoshop is not a print program and does not require a network connection to work. However, an internet connection is needed to access the web to download an image and save it back to your computer. Photoshop includes a number of different tools and techniques. No training is needed and it provides the tools that are needed to do the job, but learning and becoming proficient with Photoshop will take practice, patience, and practice. Q: How to apply css class on current element only I have a simple html form that I'm having some trouble getting to work:
\$('#name_other').addClass('have-error'); Of course it just adds the class to all the 's with that class, and as there are alot of other 's I don't want to have to add the class to all of them. A: If you want to add the class have-error only for the input with the given id, and not for all inputs with that class, use attr: \$('#name_other').attr('class', 'have-error'); If there are multiple inputs with that class, the above method will give you all of them. To apply the class only to the input with that id, use
\$('#name_other').addClass('have-error'); A: Use the attribute-selector : \$('[name="other-name"]').addClass('have-error'); {

The effect of a taming hat (Decoy) on the stereotyped response of tamed and untamed cats. There are a number of different styles of taming headwear for cats, but few studies have been performed to examine their effects. The present study investigated the effectiveness of a previously developed taming head-wear, called a 'decoy'. The aim was to extend the time in which taming and baseline social interactions could be achieved. To this end, 20 untamed cats were paired with a 'decoy' cat with which they had previously been socialized. The duration of attachment between a decoy and an untamed cat was not significantly longer than between a decoy and a tamed cat, irrespective of gender or date of pairing, although there was a trend in that direction. The untamed cats tended to lose their fear of the decoy more slowly than the decoys, and there was no difference in the overall rate of reduction of fear between the decoy and the untamed cats. This suggests that the decoy does not facilitate the behavioural development of the untamed cat, but may help to reduce its fear of the decoy at a slower rate. A weekend in London is never complete without a pot of tea and a good read, and the city's Botanic Garden offers just that. The state-of-the-art Centre for Sustainability and a few minutes from Tooting Bec Underground Station, the privately owned Garden is home to an amazing collection of tropical flora. Special exhibitions and fascinating talks ensure this haven is always interesting. But the gardens has a far wider appeal than just the conservation of plants. London is a world city and, with an estimated 3 million visitors each year, this Britain's largest tourist attraction certainly adds to the charm. Walking a winding path through the grounds, one might pass historic landscape paintings of 18th and 19th century botanists or see some of the 1,500 species of plant in residence. But most people will stop to admire the blooms, buddlejas, orchids and rare plants. Two of the main attractions are the 50-minute guided tours, which in 2016 were suspended on the grounds that proved popular with visitors. Now the self-guided tour is back, with the key difference being that you can switch off what you hear on the audio guide if you want to do your own thing. "The tour is a really good introduction to botanic gardens
