Folks, I Just have a little problem,.. in the base package of the Metropolitan
3D Engine and the. Metropolis. Open 1 Year (66\$).1. Field of the Invention
This invention relates to a cam mechanism for a manual transmission (MT),
and more particularly to a cam mechanism of an MT provided with a
transfer cylinder for shifting between a forward gear position, a neutral
position, and a reverse position. 2. Description of the Prior Art There is
known a manual transmission as disclosed in Japanese Utility Model
Publication No. 55-41142, wherein a transfer cylinder is provided with a
transfer piston having a first piston head and a second piston head
depending therefrom at opposite sides thereof, respectively, and the
transfer piston is moved integrally with a foot pedal. A cam mechanism for
shifting (or switching) between a forward gear position, a neutral position
and a reverse position of the transmission is provided in a space defined
between a wall and a cam plate disposed coaxially with a power output
shaft at opposite sides of the cam plate. A first cam surface is formed by a
toothed surface formed on the outer peripheral surface of the cam plate
for engaging a clutch drum. A second cam surface is formed by a tapered
surface formed on the inner peripheral surface of the wall of the cam
mechanism. The second cam surface is engaged by the first piston head of
the transfer piston, which is mounted to be movable coaxially with the
power output shaft. In the aforementioned cam mechanism, the cam plate
extends along the wall of the cam mechanism, which is located on a side
of the cam mechanism opposite to the floor of the vehicle. For this reason,
the cam plate is apt to be deformed, which has been a problem. A second
problem with the conventional cam mechanism is that the second piston
head is required to cooperate with the cam plate. The need for the second
piston head causes the cam plate to be large and heavy. Alan Fox Alan Fox
