The effects of chronic lithium administration on polyamine levels in different brain regions were investigated in the rat. Two weeks after LiCl injection (5 mEq/day for 7 days), brains were removed from the untreated animals and from animals that received saline solution. In the cortex, LiCl-treated rats showed a significant increase of spermidine and spermine levels. Spermidine was also increased in the hippocampus and caudate nucleus and, to a lesser extent, in the hypothalamus. These increases were not accompanied by significant changes in the contents of the other polyamines. Moreover, there was no difference in the polyamine levels between the two control groups. These results indicate that chronic LiCl administration leads to a significant increase in the levels of spermidine and spermine in the cortex, hippocampus, and caudate nucleus, probably due to a generalized increase of the metabolic activity of the brain.Q: Cannot change color of the image in HTML tag I've been doing a project with C# and WPF, and I'm pretty new to both of them. I've managed to set the label text with the name of the file which I'm trying to open, but I'm having some issues with changing the color of the background image in the "img" tag. This is how I set the text: string[] lines = File.ReadAllLines(filePath); line = textBox1.Text; //line = lines[0]; if (line == "") { MessageBox.Show("You didn't enter a file name"); return; } else { Bitmap bmp = new Bitmap(@"C:\Users\Fawzal\Downloads\b

You cannot recover objects that have been deleted from a layer on which they are anchored.
