WirelessNetConsole General 4 Highlight 4 Price 1 What's New v1.0.2.4 Fixed some minor bugs WirelessNetConsole is a small-sized and portable command-line program that automatically dumps the information of all identified wireless networks into the standard output. It shows relevant data for each entry. Portability benefits As there is no setup pack implied, you can save the program files to any part of the hard disk and call its process from a Command Prompt dialog. There is also the possibility to store WirelessNetConsole to a USB flash disk or other removable storage unit, in order to use it on any computer effortlessly and without prior installations. An important aspect worth keeping in mind is that the Windows registry and Start menu do not get updated with new entries, so there are no traces left behind after the app's removal. View network information The app shows the SSID, signal quality, security and connectivity status, authentication mode, cipher, PHY types, MAC address, RSSI, channel frequency and number, along with the company name for each detected wireless network. Unfortunately, WirelessNetConsole does not integrate an option for exporting data to file. However, it can be copied to the Clipboard, since it is displayed in a console window. Evaluation and conclusion WirelessNetConsole loads data rapidly while remaining light on the system resources. We have not encountered any problems throughout our evaluation, since it did not freeze, crash or pop up error messages. Thanks to its straightforward commands, WirelessNetConsole can be used by anyone, even those inexperienced with console apps. Use any macro of your choice with the built-in keystroke recorder. Keystrokes are recorded with their timestamp as well as the list of captured keys. One of the most interesting features is the ability to be timed, to filter the list of recorded commands by time span, or to enable or disable all the recorded keys at once. You can also create a new profile to record commands automatically in a specific time span. Detailed Options: * Computer name: * Formatted date and time: * List of all captured keys: * Start recording: * Stop recording: * Enable/disable all keys: * Start new profile: * Run as scheduled task: * Export recorded commands to file: * Set a delay for all keystrokes: * Time span: * Create new profile: Note: * Other installed macros may conflict with the recorded keys. * If a certain key combination cannot be recorded, please update the current macro. * More information on the software and its features is available at KeyMacro's website. Source code and evaluation link: This is free (mostly open source) software for Windows. >How to use: >Right-click on the software file and select "Run" >Ensure there's enough disk space >If there's no audio, then select the audio device you would like to use >Click on "Play" >Select the language you want to use >Click on "Ok" >Enjoy :) Note: If there are any problems you can always send me an email at hjuric@gmail.com Note: You can find the source code on SourceForge.
